

1. Use Case: Add Property

Actor: Landlord

Main Success Scenario

1. Landlord accesses the dashboard.
2. Landlord selects "Add Property".
3. System displays the Add Property form.
4. Landlord enters property details.
5. Landlord submits the details.
6. System validates the information.
7. System saves the property.
8. System displays confirmation message.
9. System displays the property on the dashboard.

Alternate Paths

1a. Landlord is not logged in

- 1a1. System redirects landlord to login page.
- 1a2. Use case ends.

1b. User is not authorized as landlord

- 1b1. System displays access denied message.
- 1b2. Use case ends.

4a. Required fields are empty

- 4a1. System displays validation error message.
- 4a2. Landlord enters missing information.
- 4a3. Landlord submits details
- 4a3. System validates the information.
- 4a4. System saves the property.
- 4a5. System displays confirmation message.
- 4a6. System displays the property on the dashboard.

4b. Invalid data format (e.g., negative rent, invalid name)

- 4b1. System displays format error message.
- 4b2. Landlord corrects information.
- 4b3. System validates the information.

4b4. System saves the property.

4b5. System displays confirmation message.

4b6. System displays the property on the dashboard.

7a. System fails to save property (database error)

7a1. System displays failure message.

7a2. System logs error.

7a3. Landlord retries submission.

7a3. System validates the information.

7a4. System saves the property.

7a5. System displays confirmation message.

7a6. System displays the property on the dashboard.

2. Use Case: Edit Property

Actor: Landlord

Main Success Scenario

1. Landlord accesses the dashboard.
2. Landlord selects "Properties".
3. System displays list of properties.
4. Landlord selects a property to edit.
5. System displays property details in editable form.
6. Landlord modifies property details.
7. Landlord submits updated details.
8. System validates the information.
9. System updates the property.
10. System displays confirmation message.
11. System displays updated property on dashboard.

Alternate Paths

1a. Landlord is not logged in

- 1a1. System redirects landlord to login page.
- 1a2. Use case ends.

1b. User not authorized as landlord

- 1b1. System displays access denied message.
- 1b2. Use case ends.

4a. Selected property does not exist

- 4a1. System displays "Property not found" message.
- 4a2. System refreshes property list.
- 4a3. Continue from step 3.

6a. Required fields are empty

- 6a1. System displays validation error message.
- 6a2. Landlord enters missing information.
- 6a3. Landlord submits updated details.
- 6a4. System validates the information.
- 6a5. System updates the property.
- 6a6. System displays confirmation message.
- 6a7. System displays updated property on dashboard.

6b. Invalid data format

- 6b1. System displays format error message.
- 6b2. Landlord corrects information.
- 6a3. System validates the information.
- 6a4. System updates the property.
- 6a5. System displays confirmation message.
- 6a6. System displays updated property on dashboard.

9a. System fails to update property (database error)

- 9a1. System displays failure message.
- 9a2. System logs error.
- 9a3. Landlord retries submission.
- 9a4. System validates the information.

9a5. System updates the property.

9a6. System displays confirmation message.

9a7. System displays updated property on dashboard.

3. Use Case: Remove Property

Actor: Landlord

Main Success Scenario

1. Landlord accesses the dashboard.
2. Landlord selects "Properties".
3. System displays list of properties.
4. Landlord selects a property.
5. Landlord selects "Remove Property".
6. System asks for confirmation.
7. Landlord confirms removal.
8. System deletes property.
9. System displays confirmation message.
10. System removes property from dashboard.

Alternate Paths

1a. Landlord is not logged in

- 1a1. System redirects landlord to login page.
- 1a2. Use case ends.

1b. User not authorized as landlord

- 1b1. System displays access denied message.
- 1b2. Use case ends.

4a. Property does not exist

- 4a1. System displays "Property not found" message.
- 4a2. System refreshes property list.
- 4a3. Landlord selects "Remove Property".
- 4a4. System asks for confirmation.

4a5. Landlord confirms removal.

4a6. System deletes property.

4a7. System displays confirmation message.

4a8. System removes property from dashboard

7a. Landlord cancels deletion

7a1. System cancels deletion.

7a2. System returns to dashboard.

7a3. Use case ends.

8a. Property has assigned units

8a1. System displays "Property contains units" message.

8a2. System prevents deletion.

8a3. Use case ends

8b. System fails to delete property (database error)

8b1. System displays failure message.

8b2. Landlord retries deletion.

8b3. Continue from step 7

2. Use Case: Track Unit Availability

Actor: Landlord

Main Success Scenario

1. Landlord accesses the dashboard.
2. Landlord selects "Properties".
3. System displays list of properties.
4. Landlord selects a property.
5. System displays units associated with the property.
6. Landlord selects "Available Units".
7. System displays units without assigned tenants.

Alternate Paths

2a. No properties available

2a1. System displays "No properties available" message.

2a2. Use case ends

2b. System fails to load properties

- 2b1. System displays loading error message.
- 2b2. System provides retry option.
- 2b3. Landlord retries.
- 2b4. System displays list of properties.
- 2b5. Landlord selects a property.
- 2b6. System displays units associated with the property.
- 2b7. Landlord selects "Available Units".
- 2b8. System displays units without assigned tenants

4a. Selected property has no units

- 4a1. System displays "No units available" message.
- 4a2. Landlord selects add unit.
- 4a3. System displays units associated with the property.
- 4a4. Landlord selects "Available Units".
- 4a5. System displays units without assigned tenants.

4b. Property data unavailable

- 4b1. System displays "Property data unavailable".
- 4b2. System refreshes property list.
- 4b3. System displays list of properties.
- 4b4. Landlord selects a property.
- 4b5. System displays units associated with the property.
- 4b6. Landlord selects "Available Units".
- 4b7. System displays units without assigned tenants

3. Use Case: Assign Unit to Tenant

Actor: Landlord

Main Success Scenario

1. Landlord accesses the dashboard.
2. Landlord selects "Properties".
3. System displays list of properties.
4. Landlord selects a property.
5. System displays units for the property.

6. Landlord selects an available unit.
7. System displays assignment form.
8. Landlord enters tenant information.
9. Landlord submits assignment details.
10. System validates information.
11. System assigns tenant to unit.
12. System updates unit status.
13. System notifies tenant.

Alternate Paths

2a. No properties available

2a1. System displays message.

2a2. use case ends

2b. System fails to load properties

2b1. System displays loading error.

2b2. System refresh list

2b3. System displays list of properties.

2b4. Landlord selects a property.

2b5. System displays units for the property.

2b6. Landlord selects an available unit.

2b7. System displays assignment form.

2b8. Landlord enters tenant information.

2b9. Landlord submits assignment details.

2b10. System validates information.

2b11. System assigns tenant to unit.

2b12. System updates unit status.

2b13. System notifies tenant.

5a. Property has no units

5a1. System displays "No units available".

5a2. Landlord adds unit.

5a3. System displays units for the property.

5a4. Landlord selects an available unit.

5a5. System displays assignment form.

5a6. Landlord enters tenant information.

5a7.Landlord submits assignment details.
5a8.System validates information.
5a9.System assigns tenant to unit.
5a10.System updates unit status.
5a11.System notifies tenant.

5b. Units already fully occupied

5b1. System displays "No available units".
5b2. Landlord selects another property.
5b3. Continue from step 4.

8a. Invalid tenant information entered

8a1. System displays validation error.
8a2. Landlord corrects information.
8a3. Landlord submits assignment details.
8a4.System validates information.
8a5.System assigns tenant to unit.
8a6.System updates unit status.
8a7.System notifies tenant.

8b. Tenant does not exist

8b1. System displays "Tenant not found".
8b2. Landlord creates tenant account.
8b3.Landlord enters tenant information.
8b4.Landlord submits assignment details.
8b5.System validates information.
8b6.System assigns tenant to unit.
8b7.System updates unit status.
8b8.System notifies tenant.

Use Case: Submit Complaint

Actor: Tenant

Main Success Scenario

1. Tenant accesses the dashboard.
2. Tenant selects "Log Complaint".
3. System displays complaint form.
4. Tenant selects complaint type and enters details.
5. Tenant submits complaint.
6. System captures complaint.
7. System displays confirmation message.
8. System notifies tenant that complaint is under review.

Alternate Paths

4a. Complaint type does not exist

- 4a1. System provides option to add new complaint type.
- 4a2. Tenant adds new complaint type.
- 4a3. System updates complaint type list.
- 4a4. Continue from step 4.

4b. Complaint description field is empty

- 4b1. System displays validation error message.
- 4b2. Tenant enters complaint details.
- 4b3. Continue from step 5.

5a. Tenant cancels complaint submission

- 5a1. System discards entered information.
- 5a2. System returns to dashboard.
- 5a3. Use case ends.

6a. System fails to capture complaint

- 6a1. System displays error message.
- 6a2. Tenant retries submission.
- 6a3. Continue from step 5.

Use Case: Review Complaint

Actor: Landlord

Main Success Scenario

1. System logs complaint and notifies landlord.
2. Landlord accesses notification.
3. System displays complaint dashboard.
4. Landlord selects complaint.
5. System displays complaint details.
6. Landlord reviews complaint.
7. Landlord approves complaint.
8. System updates complaint status.
9. System notifies tenant who submitted complaint.
10. System notifies tenant who complaint is against.
11. System notifies caretaker.

Alternate Paths

2a. Landlord ignores notification

- 2a1. Complaint remains pending.
- 2a2. System sends reminder notification.
- 2a3. Continue from step 2.

5a. Complaint details unclear

- 5a1. Landlord requests clarification from tenant.
- 5a2. System notifies tenant.
- 5a3. Tenant updates complaint.
- 5a4. Continue from step 6.

7a. Landlord rejects complaint

- 7a1. System marks complaint as rejected.
- 7a2. System notifies submitting tenant.
- 7a3. Use case ends.

8a. System fails to update complaint status

- 8a1. System displays error message.
- 8a2. Landlord retries action.
- 8a3. Continue from step 7.

Use Case: Issue Verdict / Fine / Warning

Actor: Caretaker

Main Success Scenario

1. System logs approved complaint to caretaker dashboard.
2. Caretaker accesses complaint.
3. System displays complaint details.
4. Caretaker selects verdict type (warning/fine).
5. Caretaker enters verdict details.
6. Caretaker submits verdict.
7. System records verdict.
8. System notifies tenant concerned.
9. System updates complaint as resolved.

Alternate Paths

2a. No approved complaints available

- 2a1. System displays "No complaints available".
- 2a2. Use case ends.

5a. Caretaker leaves verdict details empty

- 5a1. System displays validation error.
- 5a2. Caretaker enters verdict details.
- 5a3. Continue from step 6.

5b. Invalid fine amount entered

- 5b1. System displays format error.

5b2. Caretaker corrects amount.

5b3. Continue from step 6.

7a. System fails to record verdict

7a1. System displays error message.

7a2. Caretaker retries submission.

7a3. Continue from step 6.
